Figure S1. Effect on viability in cells derived from breast cancer MCF-7, BT-474, MDA-MB-468, and MDA-MB-231, and primary culture of fibroblasts of the peptide (RWQWRWQWR) at 2, 24 and 48 h of activity ± SE (n = 3). ANOVA, Tukey’s multiple comparisons at each of the concentrations evaluated p = <0.05.

Figure S2. Effect on viability in cells derived from breast cancer MCF-7, BT-474, MDA-MB-468, and MDA-MB-231, and primary culture of fibroblasts of the peptide (RGD-Ahx-RWQWRWQWR) at 2, 24 and 48 h of activity ± SE (n = 3). ANOVA, Tukey’s multiple comparisons at each of the concentrations evaluated p = <0.05.
